

Smart Facts

Tank Transmitter

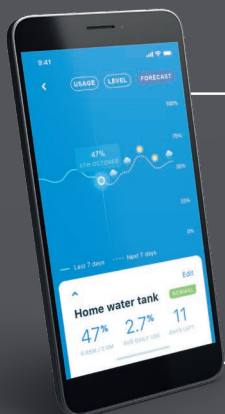

The Smart Water tank transmitter is the device in your system which collects water level data and transmits this back to the WiFi LCD Keypad or WiFi Gateway. Up to 12 tank transmitters can be connected into a single system making even complex sites simple to manage. This product has been meticulously designed to ensure outstanding and long term performance even in the most extreme outdoor environments. Solar powered and virtually maintenance free.

The tank transmitter is designed to be easily mounted on your tank, near to a point of access for the water sensor cable. Once the pairing process to the WiFi LCD Keypad or WiFi Gateway is complete the sensor can be lowered to the bottom of the tank and the unit secured with the provided mounting hardware. Power to the product is provided via a high efficiency solar panel, however for installations where no access to sunlight is available, the unit can be powered via the AC mains power supply provided with the kit.

Features

- Ruggedised marine grade materials and construction
- High efficiency mono-crystalline solar panel
- Powerful Lithium-ion rechargeable battery
- Long range wireless performance, tested up to 10km
- Up to 12 tanks can be monitored on a single system
- Name your tank transmitter for ease of identification
- Mains powered option included in kit
- Ultra-UV resistant plastic utilised for extreme environments
- Stainless Steel SS316 precision water sensor
- 4m Ruggedised cable (10m version also available)
- Range can be extended using the Active Repeater
- WiFi enabled with a free app available for iOS and Android devices
- Simple DIY system installation

Mobile app available:

Mobile App including advanced features such as graphing and weather forecasting. The ultimate water management tool in the palm of your hand.
